Math 544, Exam 2, Summer 2005

Write your answers as legibly as you can on the blank sheets of paper provided. Use only **one side** of each sheet. Be sure to number your pages. Put your solution to problem 1 first, and then your solution to number 2, etc.; although, by using enough paper, you can do the problems in any order that suits you.

There are 7 problems. Problem 1 is worth 8 points. Each of the other problems is worth 7 points. The exam is worth a total of 50 points. SHOW your work. \boxed{CIRCLE} your answer. **CHECK** your answer whenever possible. No **Calculators.**

If I know your e-mail address, I will e-mail your grade to you. If I don't already know your e-mail address and you want me to know it, then **send me an e-mail**.

If you would like, I will leave your graded exam outside my office door. You may pick it up any time before the next class. If you are interested, be sure to tell me.

I will post the solutions on my website shortly after the class is finished.

1. Consider the system of linear equations.

$$\begin{array}{c}
x_1 + & ax_2 = 1 \\
ax_1 + (3a - 2)x_2 = 2.
\end{array}$$

- (a) Find all values of a which cause the system to have no solution?
- (b) Find all values of a which cause the system to have exactly one solution?
- (c) Find all values of a which cause the system to have an infinite number of solutions?

Explain thoroughly.

- 2. Define "linearly independent". Use complete sentences. Include everything that is necessary, but nothing more.
- 3. Define "linear combination". Use complete sentences. Include everything that is necessary, but nothing more.
- 4. Let A be an $n \times n$ matrix. List three statements that are equivalent to "A is non-singular".
- 5. Let A and B be $n \times n$ matrices with AB equal to the identity matrix. PROVE BA is equal to the identity matrix. ("We did this in class" is not a satisfactory answer. I expect a complete, coherent proof. You are allowed to use any relevant part of problem 4.)

6. Find the general solution of the following system of linear equations.

$$\begin{aligned} x_1 + 2x_2 + 3x_3 + x_4 &= 2\\ x_1 + 2x_2 + 4x_3 + 2x_4 &= 3. \end{aligned}$$

Also find **three** particular solutions of this system of equations. **Be sure to check** that all three of your particular solutions really satisfy the original system of linear equations.

7. Let v_1 , v_2 , and v_3 be non-zero vectors in \mathbb{R}^4 . Suppose that $v_i^{\mathrm{T}}v_j = 0$ for all subscripts i and j with $i \neq j$. Prove that v_1 , v_2 , and v_3 are linearly independent.
